

VERSION WITH MARKINGS TO SHOW CHANGES MADE

IN THE CLAIMS:

Please amend claims 1, and 15 as follows:

1. An array of at least 10 different antibodies arranged in discrete areas of a solid support wherein each antibody specifically binds a different antigen and is correlated to expression of a polynucleotide sequence encoding the antigen [to which the antibody is specific].
15. A device comprising an array of 10 reaction sites in a pre-selected pattern, wherein each reaction site contains an antibody that specifically binds a protein wherein the antibody is correlated on a one-to-one basis with an isolated polynucleotide sequence expressed to encode[ing] the protein to which the antibody specifically binds.
